

CRYSTAL IMAGE SPRAY BUFF

SPRAY-ON GLOSS RESTORER

**REACTIVE POLYMER MATRIX
PRECISELY MATCHES RESPONSE
TO MACHINE SPEED**

READY-TO-USE FORMULA

ELIMINATES GUESSWORK

DESCRIPTION

CRYSTAL IMAGE Spray Buff has been precision formulated to match the composition of CRYSTAL and JEWEL Floor Finishes. Its unique Reactive Polymer Matrix (RPM) adjusts to machine speed and pad type to restore your finishes maximum gloss. A regular spray buffing program, featuring CRYSTAL IMAGE, repairs scratches and marks, enhances finish durability and extends finish life.

Dry mop the entire floor using a dustmop treated with CLEAR ATTRACTIONS Dust Mop Treatment to remove loose soil. If a heavy soil film remains after dry mopping, clean floor with a dampmop or an autoscrubber using EXCELCLEANER.

DIRECTIONS

Apply a light mist of CRYSTAL IMAGE to the floor. Move buffing machine in a gentle side-to-side motion until floor appears dry and shiny.

PROFESSIONAL SECRETS TO EFFECTIVE FLOOR CARE:

- Floors should be dust mopped and damp mopped before spray buffing - accumulated dust and dirt cause unsightly scratches or abrasions that will significantly reduce finish durability and lead to frequent stripping and recoating.
- Inspect pads frequently. If pads show an accumulation of old floor finish, dirt or accumulated restorer solution in the space between pad fibers, clean or replace immediately.
- Store damp pads in plastic bags between uses. Dried-out pads can scratch floors and require substantial amounts of spray buffing solution to become usable again.
- Spray buff a small area (approximately 5 foot x 5foot) at a time, then move on to the next area.
